

# WebSCADA

Always in control.

*Your process*

*Wherever you are...*

*...you are always  
in control.*

*You are in control*

## **SCADA (Supervisory Control and Data Acquisition)**

Imagine: You are on a business trip. Your customer calls to report low levels in one of your (mobile) installations. Direct action is required. Your host does not have the required software to control your installations and your laptop is nowhere to be found... You just lost a client.....

WebSCADA prevents these nightmares. Over a dynamic webpage you can control your processes anywhere, anytime, provided there is some kind of internet access.

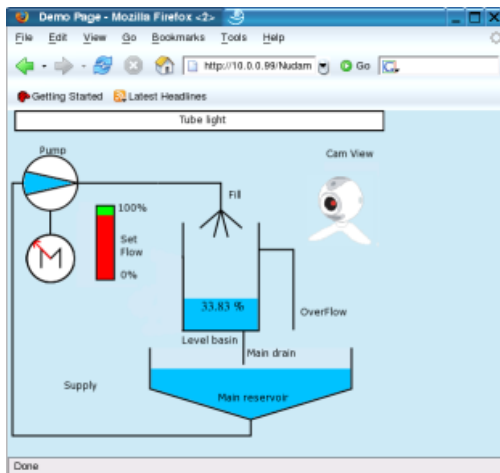

# WebSCADA

Always in control.

## WebSCADA advantages

- \* **Unlimited number of clients:** There is no limit to the number of SCADA visualisation pages. Whether you use a single SCADA page in the vicinity of the installation or you are using 10 SCADA pages anywhere else in this world, you just pay for a single licence.
- \* **On-demand status of the situation:** The internet SCADA webpage is continuously updated. You will be able to follow actions by other operators.
- \* **Real-time visualisation:** Real-time monitoring of processes provide operators insight into the total process status. This creates more understanding of the entire process.
- \* **Platform independent:** WebSCADA functions flawless on: Linux, Solaris, Unix, Windows.
- \* **Language independent:** For world wide process control the same SCADA page can be used simultaneously in several languages.
- \* **Remote control:** WebSCADA is ideal for process control over large distances. The webpage performs well with an analog modem. Whether your installation is operational in London or Santiago, WebSCADA will deliver on-demand insight and control.
- \* No additional costs for extra control SCADA pages.
- \* For demonstration purposes another client can follow your actions.
- \* JAVA technology.
- \* The system is based on available components.
- \* Very short implementation curve. A top product for low-budget prices.

Always in control.

## WebSCADA Demo

WebSCADA is derived from our experiences with process control, research and development and the building of Sense®.

We recognise the advantages of WebSCADA over the classical Client-Server systems.

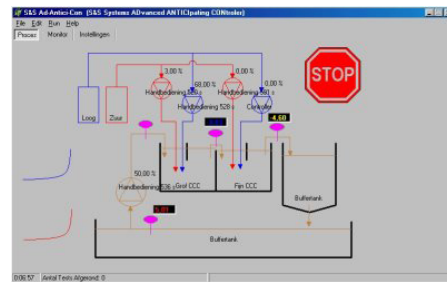

A demonstration of this system is available at:

<http://s-s-system2.demon.nl/NudamDemo>

Please do contact us for information or comments about this system, we are happy to inform you.

With kind regards from Holland,

Team S&S Systems
